No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

C;Comment: NCAM mediates cell-cell adhesion via homophilic binding with another NCAM mol
C;Comment: Several forms of NCAM are produced by alternative splicing. See also PIR:IJMS

Cloning of neurotrimin defines a new subfamily of differentially expressed neural cell adhesion molecules.";

T. Cloning of neurotrimin defines a new subfamily of differentially expressed neural cell adhesion molecule.

T. Neurosci. 15:2141-2156(1995).

T. FUNCTION: Neural cell adhesion molecule.

T. SUBCELLULAR LOCATION: Attached to the membrane by a GPI-anchor.

TISSUB SPECIFICITY: Central nervous system.

TISSUB SPECIFICITY: Contral nervous system.

TO EVELOPMENTAL STAGE: Expressed at high levels in several developing projection systems: in neurons of the thalamus, subplate, and lower cortical laminae in the forebrain and in the pontine nucleus, cerebellar granule cells, and Purkinje cells in

"CEPU-1, a novel immunoglobulin superfamily molecule, is expressed by developing cerebellar Purkinje cells.";

"Neurosci. 16:1770-1770 (1956).

-I- FUNCTION: It may be a cellular address molecule specific to Purkinje cells. It may represent a receptor or a subunit of a receptor complex.

-I- SUBCELLULAR LOCATION: Attached to the membrane by a GPI-anchor.

-I- ALTERNATIVE PRODUCTS:

Event-Alternative splicing; Named isoforms=2;

Name=1; Synonyms=Minor;

ISOIG=090773-1; Sequence=Displayed;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          302
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             62
TISSUE SPECIFICITY: Found on the dendrites, somata and axons of developing Purkinje cells. Undetectable on other neurons like Golgi or granule cells.

DEVELOPMENTAL STAGE: Expressed by developing cerebellar Purkinje cells. Expression coincides with the growth of the dendritic tree, after Purkinje cells have finished their migration from the ventricular zone (from E15 until E21). Expressed in the adult.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         3 QAKMQHPVSWVIFAGMAALLLFQGVPVRSGDATFPKAMDNVTVRQGESATLRCSVDNRVT

A family of glycoproteins (GPS5), which inhibit neurite outgrowth,
are members of the Ig superfamily and are related to OBCAM,
neurocrimin, LAMP and CEPU-1.";
J. Cell Sci. 109:3129-3138(1996).
J. Cell Sci. 109:3129-3138(1996).
J. Cell Sci. 109:3129-3138(1996).
J. SUBCELLULAR LOCATION: Attached to the membrane by a GPI-anchor.
J. SUBCELLULAR LOCATION: Attached to the nervous system.
J. SUBCELOPMENTAL STAGE: Increases during development from very low
levels at embryonic day 10 and is most abundant after hatching.
J. SIMILARITY: Belongs to the immunoglobulin superfamily. IgLON
                                                                                                                                                                                                                                                                                                                                                              family.
SIMILARITY: Contains 3 Ig-like C2-type (immunoglobulin-like)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         4
